CRIME SCENE INVESTIGATION REPORT

BIOLOGY SECTION

1800 Paseo Rancho Castilla
Los Angeles, CA 90032
Phone: (323) 267-6110
FAX: (323) 276-1962

File Number: 14-14069
Agency: Long Beach P.D.
Investigator: Johnson
Charge: **Dead Body Undetermined**
Report Date: **July 15, 2014**

Victim: Dana Jones (CC# 2014-01724)
Subject: Cain Jones

On **March 13, 2014**, at the request of Detective Johnson of the Long Beach Police Department, a Field Investigation was conducted at 7053 Stearns Street, in the city of Long Beach. The purpose of the investigation was to process the house for possible biological evidence. Forensic Identification Specialist Martin Mutoc from the Latent Print Section was present for photography purposes. Senior Criminalist Betty Ring from the Biology Section was present for training purposes.

Observations

The house located at 7053 Stearns Street was a single family residence in a residential neighborhood. It had three bedrooms, two bathrooms, a kitchen, dining room and two living rooms. The scene consisted of one bedroom that served as an exercise room located on the south east corner of the house. **The examination of the house was restricted to the exercise room only.**

The exercise room had white walls and gray trim. The floor was concrete and painted black. The room had a large wooden hutch on the west wall. The sliding doors on the top part of the hutch opened to a television, electronic equipment, miscellaneous books and paperwork. The bottom half consisted of twelve pull drawers that contained miscellaneous clothing. The south wall had two black exercise mats and a door with windows that lead to an outdoor patio. This door had white curtains framing it. The east wall consisted of a basket with miscellaneous exercise equipment, a punching bag, a wooden vase, a wooden table with miscellaneous decorative items, dumb bells and miscellaneous weights. The north wall consisted of a closet with mirrored sliding doors containing clothing, containers with blankets and miscellaneous items.

Examinations

The exercise room was tested with the luminol reagent. **Four dumbbells, one drawer on the hutch, four areas on the floor and one of the black mats luminesced. These areas were tested with a presumptive chemical test for blood and all gave a negative result. No evidence items were collected.**

Additional Test Methodology

The examination for blood includes a visual and/or a presumptive chemical test for the presence of blood.

Blood results are inconclusive when an area without visible bloodstains is luminol or Bluestar Magnum positive and a presumptive chemical test for the presence of blood is negative. Luminol or Bluestar Magnum is a presumptive chemical test for blood; however, it is also known to react with substances other than blood such as paints and cleaning products.
